# Fire Pits

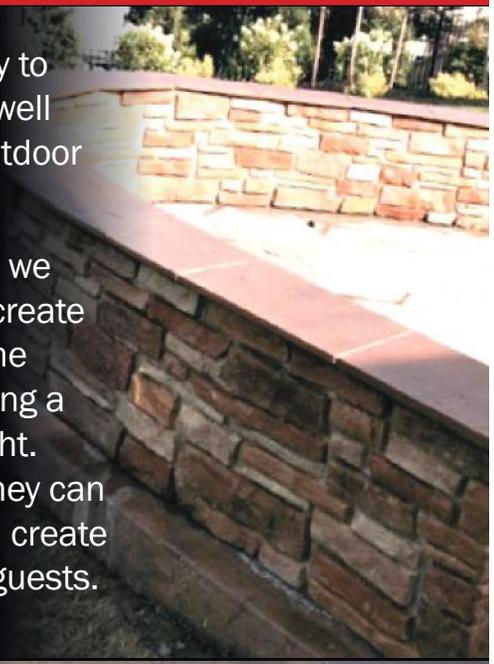

The popularity of fire pits and the fire effects they produce is one of the fastest growing trends in outdoor design. The allure of sitting around a fire ring has been around since the beginning of mankind. The fire provides warmth, light, and, of course relaxation. A dancing flame has a mesmerizing affect that encourages you to unwind and settle in. The popularity of fire pits has grown rapidly in recent years. Proper design and construction will ensure a safe and enjoyable feature that will last several decades. And, like our walls, the fire pits can be hand stained to your specifications.

BlackWater Designer Concrete can add beauty to your outdoor living spaces with decorative concrete walls. They can be designed to your specifications, and can be hand stained as you prefer. Well placed seating walls are a simple and low cost way to incorporate a focal point that also serves as an entertaining area, as well as a showcase for design materials such as natural stone, into any outdoor garden space.

## Decorative Walls

When designing outdoor space for entertaining, one of the first things we suggest is to divide the space into outdoor rooms. One terrific way to create the feeling of different rooms or spaces is to create varying levels in the yards. BlackWater Designer Concrete can help accomplish this by using a series of concrete steps and low retaining walls designed at seat height. The placement of these seating walls can create great focal points. They can be used to surround and highlight a fountain or favorite water feature, create a raised tree planter or add substantial seating area for entertaining guests.

# Sure Broom Overlays

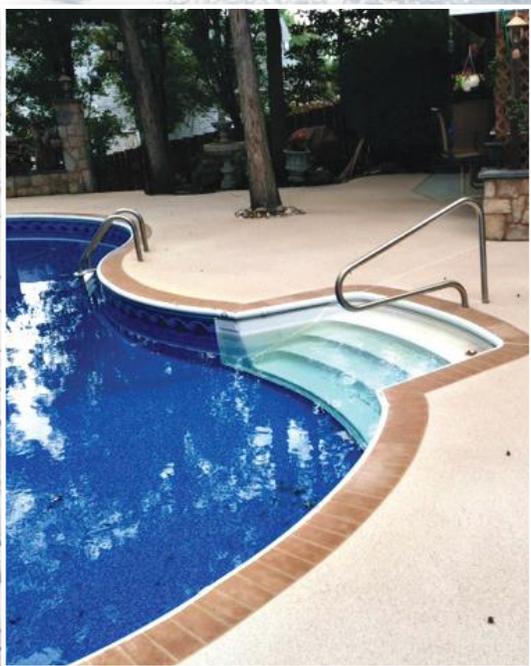

BlackWater Designer Concrete uses SureBroom which is a cementitious topping that is designed for leveling and retexturing both interior and exterior concrete surfaces. When broomed, it resembles freshly poured concrete. Typical areas of use include parking decks, driveways, sidewalks, parking lots or any horizontal concrete surface requiring repair of spalled areas, low spots, etc. SureBroom is applied with a base coat using squeegees, and then broomed on. When applied properly, the newly broomed surface creates a slip resistant finish that is ready to be sealed to protect against staining. SureBroom is also suitable for heavily trafficked commercial projects as it has a compressive strength of 6100 PSI.

# Pool Decks

Stamped concrete is an ideal pool deck surface, combining the attributes of beauty, durability, and low maintenance. Stamped concrete pool decks give you a vast array of decorative options not possible with other pool deck materials. You can choose from many different stone, brick, and tile patterns and even wood-grained textures. To prevent the surface from being slippery when wet, an anti-skid agent by con-crete werks can be added to the sealer. For a cooler surface, we recommend lighter colors on pool deck surfaces.

# Epoxy Floor System's

Create a custom durable, elegant floor with a high end look using epoxy floor systems

Perfect for Commercial and Residential

Easy maintenance, durable, shock resistant, great abrasion resistance

Many colors and applications available

- Quartz
- Vinyl chips
- Metallic
- Mica Chip
- Slurry (Commercial application, high temp., 1/8" thick, very durable)

Great for:

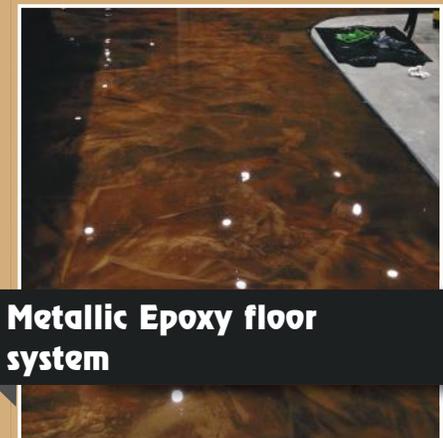

- Basements
- Carports
- Restaurants
- Garages
- And more

## **WHY YOU SHOULD SEAL STAMPED CONCRETE**

Whether you're having a beautiful new stamped concrete patio, walkway or pool deck poured or you already have one, it's important that you protect your investment. The right sealer will keep your stamped concrete looking great for many years, or rejuvenate an existing stamped surface. Sealing concrete can be compared to waxing your car, wearing sunscreen or spraying Scotchgard™ on your favorite shirt. A sealer will improve the appearance of stamped concrete, prevent fading caused by UV rays and protect it from stains and harmful chemicals.

**Blackwater Designer Concrete recommends the use of Concrete Werks specialty products to protect your investment. Please feel free to contact us for your annual maintenance or contact Concrete Werks to order your own sealer concrete products direct. Check out Concrete Werks' website for sealer tips and products: [www.con-cretewerks.com](http://www.con-cretewerks.com)**

### **Benefits of Sealing Stamped Concrete**

- Prevents color fading caused by U.V. rays
- Improves appearance
- Protects from stains
- Locks out moisture
- Reduces chance of freeze/thaw damage
- Protects from deicing salts and chemicals

# Maintenance

When properly cared for, stamped concrete is durable and can last for a long time. In some instances, it is even more durable than regular, plain concrete surfaces. Cleaning your concrete periodically and keeping it sealed with the right **concrete sealers** are the key components of any good maintenance program.

Most contractors will apply several coats of protective sealer to stamped concrete during installation to block the penetration of dirt, deicing chemicals, oil and grease stains, and other substances. However, even professionally sealed stamped concrete will require routine maintenance, depending on conditions and foot-traffic it receives. Here are tips for cleaning and treating your stamped concrete to preserve its beauty and extend its life.

## General Cleaning Guidelines

Here are some general guidelines for cleaning and maintaining stamped concrete:

- Keep the surface free of debris by using a broom, leaf blower, or rinsing with water.
- Exterior surfaces can be pressure washed or scrubbed with a mild detergent. For interior surfaces, wet mopping or dry dust mopping of the floor is typically the only routine upkeep needed.
- Don't allow debris to sit for long periods of time on an area of the surface.
- There are a variety of ways to remove stubborn stains such as dirt, tire marks, leaf stains, and grease spots. In these cases, water may not be enough. This is when stronger cleaning chemicals or a power washing and scrubbing may be required. Read more about **power washing**, using **chemicals to clean stains**, removing oil on concrete.
- Periodic sealing is the best way to protect your concrete from moisture penetration, staining, freeze-thaw conditions, de-icing chemicals, and abrasion.
- Get on a maintenance plan with us at **Blackwater** to properly maintain your decorative concrete annually.

# Our Goal

At Blackwater Concrete our goal is to provide personalized service and distinctive ideas, giving each client and project the full value of our collective experience and knowledge. By combining the broad based skills of our artisans and the best in disciplined professionalism, we deliver on our commitments.

As a family owned company, we provide attention to detail and highest level possible of customer service. Every project is unique and is treated as our priority. And, our concrete artisans take personal pride in offering high quality work with superior finishes.

We offer all aspects of decorative concrete from stamped to acid stains and we also offer traditional masonry work to accent any decorative concrete work. We use the perfected method of stamped concrete and overlays to replicate unique and realistic looks of imported slate, quarried and textured stone. Blackwater provides artistry with the decades of durability, at a lower cost.

## FREE ESTIMATES

We also offer estimates online for our busy prospects (please provide as much detail as possible).
